

LAVIT BEVERAGE SYSTEM RESET AND MAINTENANCE GUIDE

Safety brewed
together

As your coffee service provider, health and safety are our top priorities. The following guide provides information from the manufacturer on measures you can implement for safe use of your LAVIT beverage system.

For optimal maintenance of your Safety Brewed Together™ water station, we recommend you follow the reset and maintenance guidelines below for your LAVIT beverage system.

A TO DECOMMISSION YOUR LAVIT

1. Turn off the water supply to the machine.
2. Locate a suitable sized bucket to drain the still and sparkling water (1.5 gallons minimum).
3. Remove drip tray.
4. Unplug the cooler and position it over the bucket for draining.
5. Remove the rear drain plug and drain water into the bucket until the flow stops - tilt the cooler to ensure all water is drained. (Reinstall drain plug with the # 2 Stainless Steel Screw).
6. **ONLY** drain the soda water tank after the main tank has been fully drained.
7. Plug the cooler back in. Make sure water supply is 'OFF' and then access the water setup program and select "empty soda function" in the water setup screen.
8. Pull the cooler forward and place a bucket below the beverage dispensing area.
9. Drain the soda fully until it blows only CO₂ gas.
10. Set the LAVIT machine back up as you would during an initial installation and allow the machine to operate for 24hrs - this will allow the Ozonator to fully sanitize the equipment.
11. Please ensure the end-user runs at least one sparkling water and one regular beverage through the dispenser and disposes of these prior to using the machine for the first time.

B THE FOLLOWING PROCESS SHOULD BE CONDUCTED BY YOUR VAN HOUTTE COFFEE SERVICES TECHNICAL TEAM

1. Decommission the LAVIT machine as described in the decommissioning process.
2. Flush all lines leading to any and all equipment attached to the local water source.
3. Change all filters prior to using any equipment that sources its water from the city, county, or local water systems.
4. Set the LAVIT machine back up as you would during the initial installation – your VHCS installer and/or service technicians will know how this process needs to be performed.
5. Let the machine run for 24 hrs to allow the Ozonator to properly clean the system prior to use.

For technical questions, issues or if your equipment has been disconnected for an extended period of time, please reach out to our service team: 1-866-468-1458 ext: 4
